TRAVEL MANAGEMENT SYSTEM

This is a WEB based project and it has been designed in PHP and MYSQL which has features like, we can manage Customer details, Tour packages information, Bookings and any kind of Enquiry or Issues. It has been designed to provide best services to the customer, to overcome manual errors and make computerized system.

Modules of Travel Management System

➢ **Users**
➢ **Admin**
➢ **Guest Users**

The project is being designed in such a way that all the details related to every aspect of tourism will be available separately and the customers will not have to go through any of the problem. They just have to click once and all the details will get available to them.The proposed system is highly automated and makes the travelling activities much easier and flexible.
